

Being Mini Humans – Rocket build

0+

We're inspired by the Being Human festival theme of the moon. Try this activity with your mini humans to create a rocket to visit the moon with. They could also use it to play in our moon sensory tray. Babies will enjoy painting if you make the rocket for them, but older toddlers will enjoy helping you to build it too.

You need:

- A cardboard tube
- Some recycled cardboard
- Glue or tape
- Colourful water-based, baby safe paints

- Use the templates on the back of this worksheet to cut out a nose cone and 3 or 4 fins from thin card. Cereal box card is ideal. Roll the cone and glue the tab to hold it in place.

• Now use the tabs on the cone to stick it to the top of your tube. Then stick on the fins using their tabs. You can use glue or tape – masking or parcel tape is perfect because it is easy to paint over.

• Now let wee ones decorate it with paint. Then allow to dry before playing
